PROFILE

I am a Computer Science graduate from Binus University with a minor in Database Technology and a GPA of 3.55. I have a strong interest in data-related roles, particularly in Business Intelligence, Data Analytics, and Data Engineering, supported by both academic knowledge and hands-on industry experience. I have over one year of professional experience in data and technology roles.

As a Business Intelligence Analyst at StickEarn , I worked closely with founders and key stakeholders in a fast-paced startup environment. This exposure allowed me to gain a deep understanding of business operations and company performance, while leveraging data to support strategic decision-making. I utilized tools such as BigQuery, Metabase, Airflow, and Airbyte to build data pipelines, transform data, and create insightful dashboards.

To further strengthen my technical foundation, I have completed SQL and Tableau training through platforms such as HackerRank and RevoU. I also improved my proficiency organizational involvement, where I developed both technical and leadership skills.
I am a proactive and resilient individual who thrives in collaborative environments, enjoys solving complex problems, and continuously seeks to grow in the data field.

EDUCATION

BINA NUSANTARA UNIVERSITY August 2020 – July 2024
Computer Science Major.

- Database System Minor.
- GPA: 3.55.

JOHN DE BRITTO SENIOR HIGH SCHOOL June 2017- May 2020

- **Major in Science**

WORK EXPERIENCE

Business Intelligence Analyst at Stickearn March 2025- Current

- Developed 10+ interactive dashboards using Metabase, utilized daily by Operations, Sales, and Strategic Partnership teams to monitor driver performance and campaign execution
- Built automated data pipelines using Airflow, Airbyte, and Python to integrate and transform data from multiple sources into BigQuery
- Reduced reliance on manual Google Sheets tracking by centralizing data into dashboards, improving efficiency and data accessibility across teams
- Designed and developed a company-wide “business health” dashboard to track key metrics such as revenue, margin, campaign performance, execution health, vendor concentration
- Built performance dashboards to evaluate cross-functional team effectiveness, including Sales and Strategic Partnerships (e.g., sales performance, cost efficiency, workload, ticket volume, and turnaround time)
- Conducted driver performance analysis, enabling Operations teams to monitor and optimize campaign outcomes in real time
- Performed geospatial analysis using Foursquare data (polygon mapping and heatmaps) to identify high-density driver areas and recommend optimal billboard locations for clients
- Delivered competitor and location-based analysis to support strategic decisions for campaign placement and maximize client impact
- Collaborated closely with founders and cross-functional stakeholders (Sales, Strategic Partnerships, Operations) to translate business needs into data-driven solutions
- Provided ad-hoc analysis and actionable insights to support ongoing business initiatives and decision-making

Tools: BigQuery, Metabase, Airflow, Airbyte, Python, SQL, Foursquare, Zoho CRM, Google Sheets

ICT Intern of Sampoerna Agro Tbk November 2024- Februari 2025

- Designed and managed data pipelines using Talend Data Studio to extract, transform, and load (ETL) large datasets related to palm oil plantation operations, including production yields, harvesting schedules, and supply chain metrics.
- Utilized SQL to query, manipulate, and maintain relational databases, ensuring efficient storage and retrieval of critical business data such as plantation productivity, financial reports, and inventory levels.
- Developed interactive Tableau dashboards to visualize key performance indicators (KPIs) like crop yield trends, workforce efficiency, and cost analysis, aiding strategic decision-making for plantation management.
- Performed data cleaning and preparation, handling raw datasets like weather patterns, soil analysis, and plantation asset data, ensuring high-quality inputs for analytics and reporting.
- Collaborated with cross-functional teams to define data requirements, optimize database structures, and enhance system integration.
- Preparing to implement advanced analytics and automation using Python for predictive modeling of crop yields and plantation logistics optimization.
- Anticipating contributions to .NET-based projects to develop robust enterprise solutions for operational reporting and management systems

Data Engineer Intern of Samsung Research & Development Indonesia March 2023- Feb 2024

- As an intern, I actively learned from my seniors to improve my own skills and learn from their insights. This collaborative approach fostered a positive knowledge-sharing environment within the development team that helped me grow in my overall skills and understanding of the work itself.
- As a Data Engineer, I played a role in the development of an innovative application. My responsibilities included not only crafting and implementing frontend features but also actively participating in bug fixing and overall application enhancement.
- One of the significant features I contributed to was a revamped email and also a feature that focused on company detail. This involved collaborating with cross-functional teams, including backend developers and UX/UI designers, to ensure seamless integration of the feature into the application.
- Being a Data Engineer, I worked with cloud services to optimize the application's performance, scalability, and reliability. Implementing cloud-based solutions allowed the application to handle varying workloads efficiently and ensured a smooth user experience even during peak times.

Activist of HIMTI BINUS (Student Association of Computer Science) September 2021- September 2022

- As an activist, I developed my organization skill and leadership through HIMTI Training such as HILET and LDKP to prepare every activist to have a strong leadership
- Participate in creating HIMTI Event (e.g. Workshop, seminar, etc)
- Contribute by being a PIC for an event

Member of The Response Division in HIMTI November 2021 – November 2022

- As a member of the Response Division, I assist in making study material for an exam such as preparations like making videos and notes of all materials that will be included in the exam that is accessible for all Computer Science students at HIMTI
- The goal of the Response Division is to help Computer Science Students with additional material to prepare for the exam at Bina Nusantara University

Member of The Chemistry Olympiad Team for John De Britto High School August 2018 – October 2018

- Selected to participate in the Chemistry Olympiad Team for John De Britto High School.
- Participated in OKN (National Chemistry Olympiad) UGM and OKINES

SKILLS

- **Programming**: C, Python,Java, Java Script, MySQL, HTML, CSS, Google Collab, Tableau, MS Excel, React.js, Docker,Metabase, Airbyte, Airflow, GCP (Google Cloud Platform) , Bigquery , FourSquare
- **Language**: Fluent in English and Indonesia, beginner in German.
- **Interest:** Data related software/ technologies, badminton, music.
